ISO 19604:2018-05 (E)

Fine ceramics (advanced ceramics, advanced technical ceramics) - Mechanical properties of ceramic com posites at high temperature - Determination of stress-rupture time diagram under constant tensile loading

Contents

Page

Foreword v

1 Scope 1

2 Normative references 1

3 Terms,definitionsandsymbols 1

4 Principle 3

5 Significanceanduse 3

6 Apparatus 3
6.1 Test machine 3
6.2 Gripping devices 4
6.2.1 General 4
6.2.2 Active gripping devices 4
6.2.3 Passive gripping devices 4
6.3 Test chamber 4
6.4 Load indicator 4
6.5 Extensometer 6
6.5.1 General 6
6.5.2 Mechanical extensometer 7
6.5.3 Electronic optical extensometer 7
6.6 Heating apparatus 7
6.7 Temperature measurement devices 7
6.8 Data recording system 8
6.9 Micrometers 8

7 Test specimens 8
7.1 Test specimen geometry 8
7.2 End tabs of specimen 9
7.3 Test specimen preparation 10
7.4 Number of test specimens 11

8 Test preparation 11
8.1 Alignment adjustment in tensile axis direction 11
8.2 Adjustment of heating apparatus and temperature measuring device 11
8.3 Measurement of test specimen dimension 11

9 Test procedures 12
9.1 Testing technique 12
9.1.1 Test specimen mounting 12
9.1.2 Setting of extensometers 12
9.1.3 Setting of inert atmosphere 12
9.1.4 Heating the test specimen 12
9.1.5 Monitoring of temperature and elongation 13
9.1.6 Applying load 13
9.2 Post-testing treatment 13

9.3 Test validity 13
9.4 Stress levels in tests 14
9.5 Accidental interruption of the test 14

10 Calculation of results 14
10.1 Tensile applied stress 14
10.2 Tensile strain 15
10.3 Drawing of tensile strain curve 15
10.4 Drawing of stress-rupture diagram 15

11 Test report 15
