DIN 50099:2018-12 (E)

Tensile testing of metallic cellular materials

Contents

Page

Foreword ... 3

1 Scope ... 4

2 Normative references ... 4

3 Terms and definitions ... 4

4 Symbols ... 7

5 Principle ... 7

6 Designation ... 7

7 Apparatus ... 8
7.1 Testing machine ... 8
7.2 Clamping device ... 8

8 Sampling ... 8

9 Specimens ... 8
9.1 Form ... 8
9.2 Number ... 9
9.3 Determining the original cross-section (S_0) ... 9

10 Test pieces ... 9
10.1 General ... 9
10.2 Preparation ... 9

11 Procedure ... 11
11.1 General ... 11
11.2 Determination of the slope of the straight line in the quasi-elastic range ... 11
11.2.1 General ... 11
11.2.2 Determination of the slope by means of one hysteresis loop (simple method) ... 11
11.2.3 Determination of the slope by means of several hysteresis loops (multi-step method) ... 11
11.2.4 Determining the slope without hysteresis loops (direct method) ... 11
11.3 Determining proof stress R_p ... 12
11.4 Speed of testing ... 13
11.5 End of test ... 13

12 Test report ... 14

Bibliography ... 15

Figures

Figure 1 - Examples of test pieces ... 10
Figure 2 - Examples of stress/strain curves for determining parameters in tensile tests on metallic cellular materials ... 13

Tables

Table 1 - Symbols and their designations ... 7
