1 Scope 6

2 Normative references 7

3 Terms and definitions 7

4 Thermodynamic basis of the method 9
4.1 Principle 9
4.2 The fundamental equation based on the Helmholtz free energy 9
4.2.1 Background 9
4.2.2 The Helmholtz free energy 10
4.2.3 The reduced Helmholtz free energy 10
4.2.4 The reduced Helmholtz free energy of the ideal gas 11
4.2.5 The pure substance contribution to the residual part of the reduced Helmholtz free energy 11
4.2.6 The departure function contribution to the residual part of the reduced Helmholtz free energy 12
4.2.7 Reducing functions 13
4.3 Thermodynamic properties derived from the Helmholtz free energy 13
4.3.1 Background 13
4.3.2 Relations for the calculation of thermodynamic properties in the homogeneous region 14

5 Method of calculation 16
5.1 Input variables 16
5.2 Conversion from pressure to reduced density 16
5.3 Implementation 17

6 Ranges of application 18
6.1 Pure gases 18
6.2 Binary mixtures 19
6.3 Natural gases 22

7 Uncertainty of the equation of state 23
7.1 Background 23
7.2 Uncertainty for pure gases 23
7.2.1 Natural gas main components 23
7.2.2 Secondary alkanes 24
7.2.3 Other secondary components 26
7.3 Uncertainty for binary mixtures 26
7.4 Uncertainty for natural gases 28
7.4.1 Uncertainty in the normal and intermediate ranges of applicability of natural gas 29
7.4.2 Uncertainty in the full range of applicability, and calculation of properties beyond this range 30
7.5 Uncertainties in other properties 30
7.6 Impact of uncertainties of input variables 30

8 Reporting of results 30

Annex A (normative) Symbols and units 32

Annex B (normative) The reduced Helmholtz free energy of the ideal gas 34

Annex C (normative) Values of critical parameters and molar masses of the pure components 40

Annex D (normative) The residual part of the reduced Helmholtz free energy 41

Foreword 5

Annex G (informative) Examples 63

Bibliography 65

Annex E (normative) The reducing functions for density and temperature 53

Annex F (informative) Assignment of trace components 60
