Nanotechnologies - Considerations for the measurement of nano-objects and their aggregates and agglomerates (NOAA) in environmental matrices

Contents		Page
	Foreword	iv
	Introduction	v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Symbols and abbreviated terms	3
5	General considerations	3
5.1	General	3
5.2	Considerations for determining background levels of NM	4
5.3	Distribution of NM in the environment	4
5.4	Interaction with materials in environmental matrices	5
5.5	Real-time measurements versus integrated versus spot sampling	7
5.6	Preparing samples for analysis	8
5.7	Characterization and quantitation of NOAA	8
6	Considerations for sampling and analysing NOAA in air	8
6.1	General considerations	8
6.2	Transformations and dispersion in the environment	9
6.3	Sampling considerations	9
6.4	Preparation for analysis	9
6.5	Detection and quantitation	9
7	Considerations for sampling and analysing NOAA in surface water	10
7.1	General	10
7.2	Transformations and dispersion in the environment	10
7.3	Sampling considerations	10
7.4	Preparation for analysis	11
7.5	Detection and quantitation	11
7.5.1	Metal NM	11
7.5.2	Metal oxide NM	12
7.5.3	Carbon-based NM	12
8	Considerations for sampling and analysing NOAA in sea water	12
8.1	Transformations and interaction with materials in the environment	12
8.2	Sampling considerations	12
8.3	Preparation for analysis	13
8.4	Detection and quantitation	13
9	Considerations for sampling and analysing NOAA in sediment	13
9.1	Transformations and interaction with materials in the environment	13
9.2	Sampling considerations	13
9.3	Preparation for analysis	14
9.4	Detection and quantitation	14
10	Considerations for sampling and analysing NOAA in soil	14
10.1	Transformations and interaction with materials in the environment	14
10.2	Sampling considerations	15
10.3	Preparation for analysis	15
10.4	Detection and quantitation	15
	Annex A (informative) Instrumentation/techniques used to quantify and characterize NOAA	16
	Bibliography	23
