ISO 19229:2019 (E)

Gas analysis — Purity analysis and the treatment of purity data

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols

5 Principles

- 5.1 General
- 5.2 Assessment of critical and significant impurities
- 5.2.1 Critical impurities
- 5.2.2 Significant impurities

6 Analysis of impurities

- 6.1 General
- 6.2 Purity analysis with results that are traceable
- 6.3 Indicative purity analysis
- 6.4 No purity analysis
- 6.5 Estimation of the amount-of-substance fractions of unmeasured (but expected) impurities

7 Use of purity data

- 7.1 Calculation of the amount-of-substance fraction of the most abundant component
- 7.2 Calculation of the mass fraction of the most abundant component
- 7.3 Calculation of the volume fraction of the most abundant component
- 7.4 Other forms of purity data

8 Coverage intervals

- 8.1 General
- 8.2 Fractions close to 0 or 1

9 Certificates

Annex A (informative) Examples

- A.1 Purity analysis for nitrogen monoxide (NO) in nitrogen using a method without a defined zero
- A.2 Purity analysis using a method with a defined zero
- A.2.1 General
- A.2.2 Procedure to assign amount fractions
- A.3 Use of standard calibration gas mixture — CH4 in nitrogen
- A.4 Use of line strength — CO in nitrogen
