DIN EN 17243:2020-05 (E)

Cathodic protection of internal surfaces of metallic tanks, structures, equ ipment, and piping containing seawater

Contents

Page

European foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Competence of personnel 7

5 General considerations 7

6 Cathodic protection criteria 9

7 Design 11

8 Galvanic anodes system 18

9 Impressed current systems 26

10 Commissioning, operation and maintenance 30

Annex A (informative) Environmental checklist 36

Annex B (informative) Guidance on design values for internal cathodic protection for seawater containing equipment 38

B.1 Typical design cathodic current densities 38
B.2 Coating breakdown factor of protective paint systems 39

Annex C (informative) Calculation of potential distribution inside a pipe or tube 40

C.1 Potential distribution inside a pipe (ignoring anode resistance) 40
C.2 Potential distribution inside a pipe (with anode resistance) 40
C.3 Potential distribution inside a tube 41

Annex D (informative) Design of galvanic anode systems 42

D.1 Anode resistance formulae 42
D.2 Calculation of the anode resistance at the end of life 43
D.3 Electrolyte resistivity 44
D.4 Galvanic anode current output 46
D.5 Anode life 47
D.6 Minimum net weight requirement 47

Annex E (informative) Typical electrochemical characteristics of impressed current anodes. 48

Annex F (informative) Design of impressed current systems 49

F.1 Internal cathodic protection of tanks 49

F.2 Evaluation of the maximum length of a rod anode projecting into the water flow for mechanical integrity 50
