## Metallic materials - Tensile testing - Part 1: Method of test at room temperature

---

| <b>Contents</b>    |   | <b>Page</b> |
|--------------------|---|-------------|
| Foreword .....     |   | v           |
| Introduction ..... |   | vi          |
| 1                  | Scope .....   | 1           |
| 2                  | Normative references .....                                  | 1           |
| 3                  | Terms and definitions .....                                 | 1           |
| 4                  | Symbols .....   | 6           |
| 5                  | Principle .....   | 8           |
| 6                  | Test pieces .....   | 8           |
| 6.1                | Shape and dimensions .....                                  | 8           |
| 6.1.1              | General .....   | 8           |
| 6.1.2              | Machined test pieces .....                                  | 9           |
| 6.1.3              | Unmachined test pieces .....                                | 9           |
| 6.2                | Types .....   | 9           |
| 6.3                | Preparation of test pieces .....                            | 10          |
| 7                  | Determination of original cross-sectional area .....        | 10          |
| 8                  | Original gauge length and extensometer gauge length .....   | 10          |
| 8.1                | Choice of the original gauge length .....                   | 10          |
| 8.2                | Marking the original gauge length .....                     | 10          |
| 8.3                | Choice of the extensometer gauge length .....               | 11          |
| 9                  | Accuracy of testing apparatus .....                         | 11          |
| 10                 | Conditions of testing .....                                 | 11          |
| 10.1               | Setting the force zero point .....                          | 11          |
| 10.2               | Method of gripping .....                                    | 11          |
| 10.3               | Testing rates .....   | 12          |
| 10.3.1             | General information regarding testing rates .....           | 12          |
| 10.3.2             | Testing rate based on strain rate (method A) .....          | 12          |
| 10.3.3             | Testing rate based on stress rate (method B) .....          | 14          |
| 10.3.4             | Report of the chosen testing conditions .....               | 15          |
| 11                 | Determination of the upper yield strength .....             | 16          |
| 12                 | Determination of the lower yield strength .....             | 16          |
| 13                 | Determination of proof strength, plastic extension .....    | 16          |
| 14                 | Determination of proof strength, total extension .....      | 17          |
| 15                 | Method of verification of permanent set strength .....      | 17          |
| 16                 | Determination of the percentage yield point extension ..... | 17          |

|   |  |    |
|---|--|----|
| 17  | Determination of the percentage plastic extension at maximum force ..... | 17 |
| 18  | Determination of the percentage total extension at maximum force .....   | 18 |
| 19  | Determination of the percentage total extension at fracture .....        | 18 |
| 20  | Determination of percentage elongation after fracture .....              | 18 |
| 21  | Determination of percentage reduction of area .....                      | 19 |
| 22  | Test report .....  | 20 |
| 23  | Measurement uncertainty .....  | 20 |
| 23.1  | General .....  | 20 |
| 23.2  | Test conditions .....  | 21 |
| 23.3  | Test results .....   | 21 |
| Annex A (informative) Recommendations concerning the use of computer-controlled tensile testing machines .....  |  | 34 |
| Annex B (normative) Types of test pieces to be used for thin products: sheets, strips, and flats between 0,1 mm and 3 mm thick .....  |  | 40 |
| Annex C (normative) Types of test pieces to be used for wire, bars, and sections with a diameter or thickness of less than 4 mm .....   |  | 43 |
| Annex D (normative) Types of test pieces to be used for sheets and flats of thickness equal to or greater than 3 mm and wire, bars, and sections of diameter or thickness equal to or greater than 4 mm ..... |  | 44 |
| Annex E (normative) Types of test pieces to be used for tubes .....   |  | 48 |
| Annex F (informative) Estimation of the crosshead separation rate in consideration of the stiffness (or compliance) of the testing equipment .....  |  | 50 |
| Annex G (normative) Determination of the modulus of elasticity of metallic materials using a uniaxial tensile test .....  |  | 52 |
| Annex H (informative) Measuring the percentage elongation after fracture if the specified value is less than 5 % .....  |  | 61 |
| Annex I (informative) Measurement of percentage elongation after fracture based on subdivision of the original gauge length .....   |  | 62 |
| Annex J (informative) Determination of the percentage plastic elongation without necking, $A_{wn}$ , for long products such as bars, wire, and rods .....   |  | 64 |
| Annex K (informative) Estimation of the uncertainty of measurement .....  |  | 65 |
| Annex L (informative) Precision of tensile testing -- Results from interlaboratory programmes .....   |  | 69 |
| Bibliography .....  |  | 76 |
