DIN EN ISO 19226:2020-05 (E)

Nuclear energy - Determination of neutron fluence and displacement per atom (dpa) in reactor vessel and internals (ISO 19226:2017)

Contents

Page

European foreword ... **3**

Foreword ... **4**

Introduction ... **5**

1 Scope ... **6**

2 Normative references ... **6**

3 Terms and definitions ... **6**

4 Transport theory calculational models ... **8**
4.1 General ... 8
4.1.1 Output requirements ... 8
4.1.2 Methodology: transport calculations with fixed sources ... 8
4.2 Transport calculation ... 9
4.2.1 Input data ... 9
4.2.2 Discrete ordinates (SN) method ... 9
4.2.3 Monte Carlo transport method ... 9
4.2.4 Adjoint fluence calculations ... 10
4.3 Validation of neutron fluence calculational values ... 10
4.4 Determination of calculational uncertainties ... 10

5 Reactor pressure vessel neutron dosimetry measurements ... **11**
5.1 Introduction ... 11
5.2 General requirements for reactor vessel neutron metrology ... 11
5.3 Stable-product neutron dosimeters ... 12
5.4 Dosimeter response parameters ... 12
5.5 Uncertainty estimates and measurement validation in standard neutron fields ... 12

6 Comparison of calculations with measurements ... **13**
6.1 Introduction ... 13
6.2 Direct comparison of calculated activities with measured sensor activities ... 13
6.3 Comparison of calculated rates with measured average full-power reaction rates ... 13
6.4 Comparison of the calculations against measurements using least-squares methods ... 13

7 Determination of the best-estimate fluence ... **14**

8 Calculational methods for dpa and gas production ... **14**
8.1 Displacements per atom (dpa) ... 14
8.2 Gas production ... 14

Bibliography ... **16**
