Fine bubble technology - Cleaning applications - Part 1: Test method for cleaning salt (NaCl)-stained surfaces

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Principle of cleaning performance test	1
5	Test apparatus for cleaning test	2
5.1	High-pressure water jet	2
5.1.1	Test conditions	2
5.1.2	Characteristics of the high-pressure water jet	2
5.2	Measuring instrument	3
6	Salt-stained steel test plate for cleaning performance test	3
7	Procedure	3
7.1	General	3
7.2	Measurement before cleaning the surface of the steel test plate	3
7.3	Cleaning method of the surface of the steel test plate	4
7.4	Measurement of salt stains after cleaning the surface of the steel test plate	5
8	Calculation method of salt stain removal	6
8.1	Calculation method of salt removal ratio	6
8.2	Calculation method of salt removal quantity	6
9	Test report	6
Annex A (informative) Surface salinity meter		8
Annex B (informative) Example of evaluation results for cleaning of steel bridge girder edges		9
Annex C (informative) Example of test result table		11
