

### Contents

	Foreword	
	Introduction	
1	Scope	
2	Normative references	
3	Terms, definitions and abbreviated terms	
4	Characterization of nanostructured materials with surface analysis methods	
4.1	Introduction	
4.2	Electron Spectroscopies (AES and XPS)	
4.3	Ion-beam surface analysis methods (SIMS and LEIS)	
4.4	Scanning probe microscopy	
4.5	Surface characterization of carbon nanostructures	
5	Analysis considerations, issues and challenges associated with characterization of nanostructured materials: Information for the analyst	
5.1	Introduction	
5.2	General considerations and analysis challenges	
5.3	Physical properties	
5.4	Particle stability and damage: influence of size, surface energy and confluence of energy scales	
5.4.1	Crystal structure	
5.4.2	Damage and probe effects	
5.4.3	Time and environment	
5.4.3.1	General information	
5.4.3.2	Effect of environment on nanomaterial structure and properties	
5.4.3.3	Time-dependent properties	
5.4.3.4	Proximity effects	
5.5	Sample mounting and preparation considerations	
5.6	Specific considerations for analysis of nanostructured materials using XPS, AES, SIMS and SPM	
5.6.1	Introduction	
5.6.2	Issues related to application of XPS to nanomaterials	
5.6.2.1	General information	
5.6.2.2	Influence of shape	
5.6.2.3	Low density of particles supported on a substrate	
5.6.2.4	Agglomerates of particles	
5.6.2.5	Binding-energy and peak-width changes	
5.6.3	Issues related to the application of AES to nanostructured materials	
5.6.4	Issues related to application of SIMS to nanoparticles	
5.6.5	Issues related to the application of scanning probe methods to nanoparticles	
6	General characterization needs and opportunities for nanostructured materials
