ISO 1833-22:2020 (E)

Textiles — Quantitative chemical analysis — Part 22: Mixtures of viscose or certain types of cupro or modal or lyocell with flax fibres (method using formic acid and zinc chloride)

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Reagents and apparatus

5.1 General
5.2 Reagent
5.3 Apparatus

6 Test procedure

6.1 General
6.2 Removal of the non-cellulosic components of the flax fibres
6.3 Dissolution of viscose, cupro, modal or lyocell fibre

7 Calculation and expression of results

7.1 Calculation of loss in mass during pre-treatment
7.2 Calculation of dry mass of after-transfer mixture corrected to its initial dry mass before pre-treatment
7.3 Calculation of dry masses of viscose or cupro or modal or lyocell and pretreated flax fibres
7.4 Calculation of the percentages of each component with agreed percentage additions for moisture

8 Precision
