Ellipsometry — Principles

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms, definitions, symbols and abbreviated terms

3.1 Terms and definitions
3.2 Symbols and abbreviated terms

4 Experimental boundary conditions with respect to the sample

5 Experimental boundary conditions with respect to the measurement

6 Model-correlated boundary conditions of the simulation

7 Basic models

7.1 General
7.2 Bulk material (case 1 of application)
7.3 Transparent single layer (case 2 of application)
7.4 Semi-transparent single layer (case 3 of application)
7.5 Multiple layers and periodic layers (case 4 of application)
7.6 Effective materials (case 5 of application)

8 Raw data

9 Verification of correct adjustment of the device

9.1 Straight line measurement
9.2 Simple measurement of angles
9.2.1 Measurement on a known sample, e.g. SiO2/Si, with fitting of the angle of incidence
9.2.2 Measurement of the Brewster's angle of water, of a solvent or of technical glass

10 Verification of the device regarding correct calibration

11 Test report

Annex A (informative) Mathematical and physical principles of ellipsometry

A.1 Optical parameters
A.2 Optical material constants and function
A.3 Dielectric constants and function
A.4 Relationship between complex refractive index N and dielectric function ε
A.5 Definition of the pseudo-dielectric function
A.6 Interface parameters
A.7 Quality function between model-based simulated (mod.) and experimentally determined (exp.) ellipsometric transfer quantities
A.8 Jones vectors and Jones matrices
A.9 Stokes vectors and Mueller matrices
