ISO 16181-2:2021 (E)

Footwear — Critical substances potentially present in footwear and footwear components — Part 2: Determination of phthalate without solvent extraction

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Apparatus

6 Reagents and materials

7 Sampling

8 Test procedure

- 8.1 Test sample preparation
- 8.2 Calibration
- 8.3 Chromatographic analysis
- 8.3.1 The chromatography parameters for gas chromatograph – mass spectrometer equipped with a pyrolyzer
- 8.3.2 Qualitative and quantitative analysis by gas chromatograph – mass spectrometer equipped with a pyrolyzer

9 Calculation of phthalate compounds in the sample

- 9.1 Calculation of the phthalate compounds in the sample
- 9.2 Performance of the test method

10 Detection limit

11 Test report

Annex A (informative) List of phthalates specified in CEN/TR 16417

Annex B (informative) Sampling guidelines

- B.1 General
- B.2 Classification of test sample
- B.2.1 General
- B.2.2 Homogeneous test sample
- B.2.3 Heterogeneous test sample (multi-layer)
- B.3 Sampling
- B.3.1 Conditioning of test sample
- B.3.2 Procedure
- B.3.3 Homogeneous test sample
- B.3.4 Heterogeneous test sample (multi-layer)

Annex C (informative) Chromatography parameters for gas chromatography mass spectrometry equipped with a pyrolyzer

- C.1 Pyrolyzer
- C.2 Gas chromatography
- C.3 Mass spectrometry

Annex D (informative) Verification of the evolved gas analysis (EGA) thermal desorption zone

D.1 EGA thermogram using Py/TD-GC-MS
D.2 EGA analysis condition of Py/TD-GC-MS

Annex E (informative) Examples of chromatogram for phthalate by Py/TD-GC-MS

Annex F (informative) Comparative test results of ISO 16181-1 and this document (i.e. ISO 16181-2)

F.1 Sample 1: PVC
F.2 Sample 2: Textile
F.3 Sample 3: PP Low
F.4 Sample 4: PP High
