ISO 6505:2021 (E)

Rubber, vulcanized or thermoplastic — Determination of tendency to adhere to and corrode metals

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Materials

6 Apparatus

7 Test metals

8 Calibration

9 Test pieces

- 9.1 Preparation
- 9.1.1 Square test pieces
- 9.1.2 O-ring test pieces
- 9.2 Number
- 9.3 Time-interval between forming the material and testing
- 9.4 Storage

10 Test conditions

- 10.1 Temperature
- 10.2 Test period
- 10.3 Humidity

11 Procedure

- 11.1 Precaution
- 11.2 Preparation of rubber test pieces for testing
- 11.3 Number of metal test strips
- 11.4 Preparation of surfaces of metal test strips
- 11.5 Determination
- 11.5.1 Tests in a dry atmosphere
- 11.5.1.1 Tests using sheet material (square test pieces)
- 11.5.1.2 Tests using O-rings
- 11.5.2 Tests in a wet atmosphere
- 11.5.2.1 Tests using sheet material (square test pieces)
- 11.5.2.2 Tests using O-rings

12 Expression of results

- 12.1 Degree of adhesion
- 12.2 Degree of corrosion
- 12.2.1 For tests in a dry atmosphere
- 12.2.2 For tests in a wet atmosphere

13 Test report

Annex A (normative) Calibration schedule

- A.1 Inspection
- A.2 Calibration schedule

Annex B (informative) Grading of degree of corrosion
