DIN EN 17501:2022-08 (E)

Non-destructive testing - Thermographic testing - Active thermography with laser excitation

Contents

Page

European foreword 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Qualification and certification of personnel 6

5 Principle of laser thermography and experimental setup 6
5.1 General 6
5.2 Typical configurations of excitation 8
5.2.1 General 8
5.2.2 Laser thermography in static configuration (without relative movement) 8
5.2.3 Laser thermography in dynamic configuration (with relative movement) 8
5.2.4 Laser thermography with different temporal excitations 8
5.2.5 Laser thermography with different spatial excitations 8
5.3 Laser and laser optics requirements 8
5.3.1 Laser irradiance and wavelength 8
5.3.2 Spatial illumination shapes 9
5.3.3 Switchable laser for lock-in thermography and other temporal techniques 10
5.3.4 Safety 10
5.4 Scanning system requirement 11
5.4.1 General 11
5.4.2 Test object position and orientation 11
5.4.3 Movement of the test object 12
5.4.4 Movement of the whole measurement system 12
5.4.5 Movement of the laser beam through optics 12
5.4.6 Movement of the laser beam and IR camera through optics 12
5.4.7 Setup stability 12
5.5 Specifications of the IR camera 12
5.6 Data processing and analysis techniques 14
5.6.1 General 14
5.6.2 Spot with relative movement 14
5.6.3 Line with relative movement 17
5.7 Data processing for crack characterization 17
5.7.1 General 17
5.7.2 Static pulsed laser spot 17
5.7.3 Continuously scanned laser spot 19
5.7.4 Continuously scanned laser line 19
5.8 Data processing and analysis techniques for the determination of lateral thermal diffusivity 20
5.9 Data processing and analysis techniques for emissivity correction 20
5.10 Data processing and analysis techniques for coating thickness control 20

6 Reference test specimens 20

7 Calibration, validation and performance of testing 20

8 Evaluation, classification and registration of thermographic indications 21

9 Test report 21

Annex A (informative) List of influential parameters for the NDT qualification of laser thermographic system 23

A.1 General 23
A.2 Input data group parameters 23
A.2.1 Component and his environment: 23
A.2.2 Discontinuities: 23
A.3 NDT laser TT System (procedure parameters) 24
A.3.1 IR Camera and optics 24
A.3.2 Laser 25
A.3.3 Scanning system and set-up 25
A.3.4 Calibration Blocks 25
A.3.5 Data processing and analysis 25

Annex B (informative) Reference blocks 27

B.1 Test specimen containing an artificial surface breaking notch 27
B.2 Test specimen containing a natural crack 28
B.3 Test specimen containing natural cracks - reference block no. 1 for magnetic particle testing according to EN ISO 9934-2 29
B.4 Test specimen containing artificial subsurface notches 29
