DIN EN ISO 21363:2022-03 (E)

Nanotechnologies - Measurements of particle size and shape distributions by transmission electron microscopy (ISO 21363:2020)

Contents

Page

European foreword ... **4**

Foreword ... **5**

Introduction ... **6**

1 Scope ... **7**

2 Normative references ... **7**

3 Terms, definitions and symbols ... **7**
3.1 Core terms — Particles ... 7
3.2 Core terms — Image capture and analysis ... 10
3.3 Core terms — Statistical symbols and definitions ... 11
3.4 Core terms — Measurands ... 13
3.5 Core terms — Metrology ... 16
3.6 Core terms — Transmission electron microscopy ... 19
3.7 Statistical symbols, measurands and descriptors ... 20
3.7.1 Statistical symbols ... 20
3.7.2 Measurands and descriptors ... 20

4 Stakeholder needs for TEM measurement procedures ... **21**

5 Sample preparation ... **22**
5.1 General ... 22
5.2 Sample sources ... 23
5.3 Use a representative sample ... 23
5.3.1 General ... 23
5.3.2 Powder samples ... 23
5.3.3 Nanoparticle dispersions in liquids ... 23
5.4 Minimize particle agglomeration in the sample dispersion ... 24
5.5 Selection of the mounting support ... 24

6 Instrument factors ... **24**
6.1 Instrument set-up ... 24
6.2 Calibration ... 25
6.2.1 General ... 25
6.2.2 Calibration standards ... 25
6.2.3 General calibration procedure ... 25
6.3 Setting TEM operating conditions for calibration ... 27

7 Image capture ... **28**
7.1 General ... 28
7.2 Setting a suitable operating magnification ... 28
7.3 Minimum particle area ... 29
7.4 Number of particles to count for particle size and shape distributions ... 29
7.5 Uniform background ... 30
7.6 Measurement procedure ... 30
7.6.1 General ... 30
7.6.2 Developing a test sample ... 31
7.6.3 Effects of magnification ... 31
7.6.4 Frames (micrographs) ... 31
7.7 Revision of image capture protocols ... 31

8 Particle analysis ... **31**

8.1 General 31
8.2 Individual particle analysis 31
8.3 Automated particle analysis 32
8.4 Example — Automated particle analysis procedure 32
9 Data analysis 33
9.1 General 33
9.2 Raw data triage — Detecting touching particles, unselected particles, artefacts and contaminants 33
9.3 Data quality assessment — Repeatability, intermediate precision and reproducibility 34
9.4 Fitting distributions to data 36
9.5 Assessing measurement uncertainty for samples under repeatability, intermediate precision or reproducibility conditions 37
9.5.1 Grand statistics for fitted parameters — Three or more datasets 37
9.5.2 Measurement uncertainty of fitted parameters 37
9.5.3 Example — Measurement uncertainty for a size descriptor 38
9.6 Bivariate analysis 38
10 Reporting 39
Annex A (informative) **Case studies overview 42**
Annex B (informative) **Discrete spheroidal nanoparticles 44**
Annex C (informative) **Size mixture 47**
Annex D (informative) **Shape mixture 59**
Annex E (informative) **Amorphous aggregates 64**
Annex F (informative) **Nanocrystalline aggregates 68**
Annex G (informative) **Nanofibres with irregular cross-sections 72**
Annex H (informative) **Nanoparticles with specific crystal habits 79**
