DIN 50159-1:2022-06 (E)

Metallic materials - Hardness testing with the UCI method - Part 1: Test method

Contents

Page

Foreword 2

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Principle 5

5 Symbols 6

6 Indication of hardness according to the UCI method 6

7 Designation 6

8 Test device 6

9 Specimen 9
9.1 Shape 9
9.2 Thickness and mass 9
9.3 Surface preparation 10
9.4 Hardness testing on metallic coatings 11
9.5 Adjustment 11

10 Procedure 11

11 Measurement uncertainty of results 12

12 Test report 12

Annex A (normative) Periodic checking of the testing device by the user 14

Annex B (informative) Measurement uncertainty of the measured hardness values 15

B.1 General 15
B.2 Uncertainty of measurement for hardness testing 16
B.2.1 Procedure without error (method 1) 16
B.2.2 Representation of the measurement result 16
B.2.3 Procedure using the measurement uncertainty of the hardness testing device (method 2) 19

Bibliography 21

Figures Figure 1 -- Example of the indication of hardness according to the UIC method 6

Figure 2 -- Schematic set-up of a UCI probe 7

Figure 3 -- Example adjustment curves for the determination of the HV (UCI) hardness from the frequency shift 8

Figure B.1 -- Structure of the metrological chain for the definition and transfer of hardness scales . 15

Tables Table 1 -- Symbols, their designations and units 6

Table 2 -- Typical applications of the UCI method 9

Table 3 -- Maximum permissible surface roughness Ra 10

Table 4 -- Relationship of surface roughness to grinding medium grain size for steels 10

Table A.1 -- Limit deviations 14

Table B.1 -- Determination of the expanded uncertainty using method M1 17

Table B.2 -- Determination of the inhomogeneity of the specimen 19
