ISO 18755:2022-12 (E)

Fine ceramics (advanced ceramics, advanced technical ceramics) - Determination of thermal diffusivity of monolithic ceramics by flash method

Contents

Page

Foreword iv

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Apparatus 3
4.1 General 3
4.2 Specimen holder 4
4.3 Flash source 4
4.4 Thermometer for measuring steady-state temperature of the specimen 5
4.5 Detector for measuring transient temperature rise of rear face of the specimen 5
4.6 Environment for measurements 5
4.7 Temperature control unit 5
4.8 Data acquisition unit 5

5 Specimen 5
5.1 Shape and dimension of specimens 5
5.2 Density of the specimen 6
5.3 Coating on the specimen 6
5.4 Reference specimen 6

6 Measurement procedure 6
6.1 Measurement of specimen thickness 6
6.2 Surface treatment 6
6.3 Determination of the flash time of the laser or light pulse and the chronological profile of the laser or light pulse 7
6.4 Temperature and atmosphere control 7
6.5 Stability of specimen temperature 7
6.6 Energy of pulse heating 7
6.7 Measurement temperature 7
6.8 Record 7

7 Data analysis 7
7.1 Calculation based on the half-rise-time method 7
7.2 Criteria for applicability of the half-rise-time method 8

8 Measurement report 10

Annex A (informative) Principle of flash thermal diffusivity measurements 13

Annex B (normative) Correction for non-ideal initial and boundary conditions 14

Annex C (informative) Data analysis algorithms to calculate thermal diffusivity from observed transient temperature curve under non-ideal initial and boundary conditions 21

Annex D (informative) Other error factors 23

Annex E (informative) Procedure to determine intrinsic thermal diffusivity 29

Annex F (informative) Reference data and reference materials of thermal diffusivity 32

Annex G (informative) Evaluation of specific heat capacity and thermal conductivity 34

Annex H (informative) Example data including precision and uncertainty up to high temperature 36

Bibliography 39
