Fine ceramics (advanced ceramics, advanced technical ceramics) - Determination of thermal diffusivity of monolithic ceramics by flash method

Contents		Page
Foreword		iv
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Apparatus	3
4.1	General	3
4.2	Specimen holder	4
4.3	Flash source	4
4.4	Thermometer for measuring steady-state temperature of the specimen	5
4.5	Detector for measuring transient temperature rise of rear face of the specimen	5
4.6	Environment for measurements	5
4.7	Temperature control unit	5
4.8	Data acquisition unit	5
5	Specimen	5
5.1	Shape and dimension of specimens	5
5.2	Density of the specimen	6
5.3	Coating on the specimen	6
5.4	Reference specimen	6
6	Measurement procedure	6
6.1	Measurement of specimen thickness	6
6.2	Surface treatment	6
6.3	Determination of the flash time of the laser or light pulse and the chronological profile of the laser or light pulse	7
6.4	Temperature and atmosphere control	7
6.5	Stability of specimen temperature	7
6.6	Energy of pulse heating	7
6.7	Measurement temperature	7
6.8	Record	7
7	Data analysis	7
7.1	Calculation based on the half-rise-time method	7
7.2	Criteria for applicability of the half-rise-time method	8
8	Measurement report	10
Annex A (informative) Principle of flash thermal diffusivity measurements		13
Annex B (normative) Correction for non-ideal initial and boundary conditions		14
Annex C (informative) Data analysis algorithms to calculate thermal diffusivity from observed transient temperature curve under non-ideal initial and boundary conditions		21
Annex D (informative) Other error factors		23
Annex E (informative) Procedure to determine intrinsic thermal diffusivity		29

Annex F (informative) Reference data and reference materials of thermal diffusivity	32
Annex G (informative) Evaluation of specific heat capacity and thermal conductivity	34
Annex H (informative) Example data including precision and uncertainty up to high temperature	36
Bibliography	39
