Foreword v

1 Scope 1

2 Normative reference 1

3 Termsanddefinitions 1

4 Principle 2

5 Specimens 2
5.1 General 2
5.1.1 General requirements 2
5.1.2 Categories and shapes of specimens 2
5.1.3 Shapes and dimensions of grips/clevises 2
5.1.4 Dimensions of specimen shoulder and radius 2
5.1.5 Machined notch 3
5.1.6 Dimensions of gauge section 3
5.1.7 Serial loading of multiple specimens 3
5.2 Preparation of specimens 4
5.2.1 Orientation of specimen sampling 4
5.2.2 Methods of specimen sampling 4
5.2.3 Surface finishing 5
5.2.4 Mechanical grinding and polishing 5
5.2.5 Electrolytic or chemical polishing 5
5.2.6 Marking 5

6 Test apparatus 7
6.1 Test set-up 7
6.2 Loading mechanism 7
6.3 Autoclave 8
6.4 Circulating loop 8

7 Experimental procedure 9
7.1 Test environment 9
7.1.1 General 9
7.1.2 Corrosion potential 10
7.1.3 Measurement parameters 10
7.2 Specimen number and applied stress 10
7.3 Testing procedures 10
7.3.1 General 10
7.3.2 Test solution adjustment 11
7.3.3 Temperature control 11
7.3.4 Loading 11
7.3.5 Unloading 11
7.3.6 Completion of test 11
7.4 Addition of crevice 11
7.4.1 General 11
7.4.2 Materials of crevice formation 11

7.4.3 Procedure of crevice addition 12
7.5 Electrical resistance measurement methods 12
7.5.1 General 12
7.5.2 Measurement requirements 13

8 Assessment of results 13
8.1 Time to failure 13
8.2 Validity of failure position 13
8.3 Other evaluation indexes 13
8.4 Observation of crack morphology 13
8.5 Detection of crack initiation using electrical resistance measurement methods 14

9 Test report 14

Annex A (informative) A comparison of specimen orientations in standards 15

Annex B (normative) Measuring items of test solution 17

Annex C (informative) Water chemistry conditions and measurement items for simulated BWR and PWR primary water environment tests 18

Annex D (informative) Procedures to interrupt and resume testing 20

Annex E (informative) Electrical resistance measurement methods 22

Annex F (informative) Test report items 25
