## Methods of environmental monitoring using integrating solid-state dosimeters

---

<b>Contents</b>		<b>Page</b>
Foreword .....		6
Introduction .....		7
1	Scope .....	8
2	Normative references .....	8
3	Terms and definitions .....	9
4	Symbols .....	12
5	Requirements on the dosimetry system .....	16
5.1	General .....	16
5.2	Rated range of use .....	17
5.3	Influence quantities .....	17
5.4	Design, enclosure and marking of dosimeters .....	17
5.5	Calibration .....	18
5.6	Documentation .....	18
6	Process requirements and specifications .....	19
6.1	Distribution of tasks between evaluation facility and monitoring body .....	19
6.2	Requirements for measurement sites .....	20
6.2.1	Number and spatial distribution of measurement sites and dosimeters .....	20
6.2.2	Site conditions and deployment of dosimeters .....	20
6.3	Monitoring period $t_M$ .....	21
6.4	Limiting the handling period $t_H$ .....	22
6.5	Detection of and correction for extraneous radiation during the handling period .....	22
7	Determining the dose .....	23
7.1	Determining the dose indication $G$ .....	23
7.2	Determination of the area dose .....	24
7.3	Determination of correction factors .....	25
7.3.1	Climate and long-term correction factor .....	25
7.3.2	Correction factor for the influence quantity photon energy and radiation incidence direction .....	26
7.3.3	Correction factor for linearity deviation .....	26
7.4	Determination of the handling dose $H_H$ .....	26
7.5	Determination of the additional dose .....	27
8	Measurement uncertainty and characteristic limits .....	27
8.1	Propagation of measurement uncertainties .....	27
8.2	Measurement uncertainty of the area dose .....	27
8.3	Measurement uncertainties of the input quantities of the area dose .....	28
8.3.1	General procedure .....	28
8.3.2	Estimate and measurement uncertainty of the dose indication $G_j$ .....	28
8.3.3	Estimate and measurement uncertainty of the climate and long-term correction for preliminary evaluation .....	29
8.4	Measurement uncertainty of the additional dose .....	29
8.5	Calculation of the standard uncertainty as a function of the assumed true value of the additional dose .....	29
8.6	Decision threshold and detection limit of the additional dose .....	30

8.7	Coverage interval for the additional dose .....	30
8.8	Best estimate and its associated standard uncertainty of the additional dose .....	30
9	Sequence of the measurement procedure .....	31
9.1	Preparing a dosimeter group .....	31
9.2	Steps at the evaluation facility .....	31
9.2.1	Preparation of the monitoring period .....	31
9.2.2	Follow-up of the monitoring period .....	32
9.3	Steps at the monitoring body .....	32
9.3.1	Start of the monitoring period .....	32
9.3.2	End of the monitoring period .....	32
9.4	Calculation of area doses .....	32
9.5	Documentation, interpretation and reporting of the monitoring results .....	33
10	Quality assurance .....	34
10.1	General .....	34
10.2	Calibration checks .....	34
10.3	Participation in comparison programmes .....	34
<b>Annex A (informative) Information on dose determination in case of incidents and emergency situations .....</b>		<b>36</b>
A.1	Requirements .....	36
A.2	Changing dosimeters .....	36
A.3	Calibration and evaluation .....	36
<b>Annex B (informative) Information on the determination of the background dose .....</b>		<b>38</b>
B.1	General .....	38
B.2	Determination of interval-specific components .....	39
B.2.1	Background dosimeters at a reference site .....	39
B.2.2	Statistical evaluation of all area dose measured values within a monitoring interval .....	40
B.3	Determination of site-specific components .....	40
B.3.1	Statistical evaluation of unaffected area dose measured values .....	40
B.3.2	Determination without unaffected monitoring intervals .....	43
B.3.3	Blanket determination .....	43
B.4	Use of additional measurement methods .....	44
<b>Annex C (informative) Example of the determination of the additional dose, its measurement uncertainty and characteristic limits (analytical method) .....</b>		<b>45</b>
C.1	General .....	45
C.2	Example data .....	45
C.3	Input quantities .....	46
C.3.1	Estimate and measurement uncertainty of the correction factors .....	46
C.3.2	Estimate and measurement uncertainty of the calibration coefficient N .....	46
C.3.3	Estimate and measurement uncertainty of the dose indications G <sub>j</sub> and G <sub>U</sub> .....	46
C.3.4	Estimate and measurement uncertainty of the handling period t <sub>H</sub> .....	47
C.3.5	Estimate and measurement uncertainty of the natural dose rate nat .....	47
C.4	Area dose and background dose .....	47
C.4.1	Determination of the dose values and their uncertainty of measurement .....	47
C.4.2	Uncertainty budget for the area dose and the background dose .....	50
C.5	Additional dose .....	51
C.5.1	Determination of the additional dose and its uncertainty of measurement .....	51
C.5.2	Uncertainty budget of the additional dose .....	52
C.5.3	Decision threshold and detection limit of the additional dose .....	53
C.5.4	Calculation of the decision threshold of the additional dose .....	54
C.5.5	Calculation of the detection limit of the additional dose .....	54
C.5.6	Limits of coverage intervals for the additional dose .....	55
C.5.7	Best estimate of the additional dose and the associated uncertainty .....	55

<b>Annex D (informative) Example of the determination of the additional dose, its measurement uncertainty and characteristic limits (Monte Carlo method)</b> .....	<b>57</b>
<b>D.1 General</b> .....	<b>57</b>
<b>D.2 Comparison of results obtained with the analytical and the Monte Carlo methods: Model functions and numerical examples from Annex C in photon dosimetry</b> .....	<b>57</b>
<b>D.3 Comparison of results obtained with the analytical and the Monte Carlo methods: Model functions from Annex C in neutron dosimetry</b> .....	<b>60</b>
<b>Annex E (informative) Environmental dosimetry for neutron radiation with thermoluminescence detectors</b> .....	<b>65</b>
<b>E.1 General description of method</b> .....	<b>65</b>
<b>E.2 Example of the determination of the additional dose, its measurement uncertainty and characteristic limits</b> .....	<b>65</b>
<b>E.2.1 General</b> .....	<b>65</b>
<b>E.2.2 Input quantities</b> .....	<b>67</b>
<b>E.2.3 Area dose and background dose</b> .....	<b>68</b>
<b>E.2.4 Uncertainty budget for the area dose and the background dose</b> .....	<b>69</b>
<b>E.2.5 Additional dose</b> .....	<b>70</b>
<b>Annex F (informative) Example of the division of a dosimeter group</b> .....	<b>74</b>
<b>Bibliography</b> .....	<b>75</b>
<b>Figures Figure D.1 -- PDF calculated by Monte Carlo method for the area dose <math>H_j</math> (in grey) in comparison with the corresponding normal distribution according to analytical method (solid line)</b> .....	<b>59</b>
<b>Figure D.2 -- PDF calculated by Monte Carlo method for the background dose <math>H_{U,j}</math> (in grey) in comparison with the corresponding normal distribution according to analytical method (solid line)</b> .....	<b>59</b>
<b>Figure D.3 -- PDFs calculated using the Monte Carlo method (in grey) for the additional dose <math>H_{z,j}</math> (top), for an additional dose of zero to determine the decision threshold , (middle), and for the detection limit , # (bottom) - each compared to the corresponding normal distribution according to the analytical method (solid lines)</b> .....	<b>60</b>
<b>Figure D.4 -- PDF calculated by the Monte Carlo method for the area dose <math>H_j</math> (in grey) in comparison with the corresponding normal distribution according to analytical method (solid line)</b> .....	<b>62</b>
<b>Figure D.5 -- PDF calculated by the Monte Carlo method for the background dose <math>H_{U,j}</math> (in grey) in comparison with the corresponding normal distribution according to analytical method (solid line)</b> .....	<b>63</b>
<b>Figure D.6 -- PDFs calculated using the Monte Carlo method (in grey) for the additional dose <math>H_{z,j}</math> (top), for an additional dose of zero to determine the decision threshold , (middle), and for the detection limit , # (bottom) - each compared to the corresponding normal distribution according to the analytical method (solid lines)</b> .....	<b>64</b>
