

DIN EN ISO 6507-1:2024-01 (E)

Metallic materials - Vickers hardness test - Part 1: Test method (ISO 6507-1:2023)

Contents	Page
European foreword	3
Foreword.....	4
1 Scope	5
2 Normative references	5
3 Terms and definitions	6
4 Symbols and designations	6
4.1 Symbols and designations used in this document.....	6
4.2 Designation of hardness number.....	7
5 Principle	7
6 Testing machine	8
6.1 Testing machine.....	8
6.2 Indenter.....	8
6.3 Diagonal measuring system.....	8
7 Test piece	9
7.1 Test surface.....	9
7.2 Preparation.....	9
7.3 Thickness.....	9
7.4 Tests on curved surfaces.....	9
7.5 Support of unstable test pieces.....	9
7.6 Metallic and other inorganic coatings.....	9
8 Procedure	10
8.1 Test temperature.....	10
8.2 Test force.....	10
8.3 Periodic verification.....	10
8.4 Test piece support and orientation.....	10
8.5 Focus on test surface.....	11
8.6 Test force application.....	11
8.7 Prevention of the effect of shock or vibration.....	11
8.8 Minimum distance between adjacent indentations.....	11
8.9 Measurement of the diagonal length.....	12
8.10 Calculation of hardness value.....	12
9 Uncertainty of the results	12
10 Test report	13
Annex A (normative) Minimum thickness of the test piece in relation to the test force and hardness	14
Annex B (normative) Tables of correction factors for use in tests made on curved surfaces	16
Annex C (normative) Procedure for periodic checking of the testing machine, diagonal measuring system and indenter by the user	20
Annex D (informative) Uncertainty of the measured hardness values	22
Annex E (informative) Vickers hardness measurement traceability	29
Annex F (informative) CCM — Working group on hardness	33
Annex G (informative) Adjustment of Köhler illumination systems	34
Annex H (normative) Determining the Vickers hardness of metallic and other inorganic coatings	35
Bibliography	39
