ISO/TS 19590:2024-08 (E)

Nanotechnologies - Characterization of nano-objects using single particle inductively coupled plasma mass spectrometry

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Abbreviated terms 3

5 Principles of operation 4
5.1 Introduction to spICP-MS 4
5.2 Reference material dependent calibration methods 6
5.2.1 Particle frequency method 6
5.2.2 Particle size method 8
5.3 Reference material free calibration methods 9
5.3.1 Dynamic mass flow method 9
5.3.2 Microdroplet calibration method 11
5.4 Particle number concentration determination 13
5.5 Particle mass and corresponding spherical equivalent diameter determination 14
5.6 Dissolved element fraction 17
5.7 Multi-isotope and multi-elemental analysis 17
5.8 Data treatment 18

6 Method development 19
6.1 Sample specification 19
6.2 Sample preparation 19
6.2.1 Aqueous suspensions and paste 20
6.2.2 Non-aqueous suspensions and creams 20
6.2.3 Powders 21
6.2.4 Larger pieces of solids 21
6.3 Selection of reference materials, quality control materials and representative test materials 21
6.4 Optimization of ICP-MS operating conditions 22

7 Qualification,performancecriteriaandmeasurementuncertainty 23
7.1 Applicability of spICP-MS 23
7.2 System qualification and quality control 23
7.3 Method performance criteria 24
7.3.1 Particle number concentration 24
7.3.2 Particle mass and equivalent spherical diameter 24
7.4 Method precision and measurement uncertainty 25

8 General measurement procedure 25

9 Test report 26
9.1 Apparatus and measurement parameters 26
9.2 Reporting test results 26

Bibliography 27
