

ISO/TS 19590:2024-08 (E)

Nanotechnologies - Characterization of nano-objects using single particle inductively coupled plasma mass spectrometry

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Abbreviated terms	3
5	Principles of operation	4
5.1	Introduction to spICP-MS	4
5.2	Reference material dependent calibration methods	6
5.2.1	Particle frequency method	6
5.2.2	Particle size method	8
5.3	Reference material free calibration methods	9
5.3.1	Dynamic mass flow method	9
5.3.2	Microdroplet calibration method	11
5.4	Particle number concentration determination	13
5.5	Particle mass and corresponding spherical equivalent diameter determination	14
5.6	Dissolved element fraction	17
5.7	Multi-isotope and multi-elemental analysis	17
5.8	Data treatment	18
6	Method development	19
6.1	Sample specification	19
6.2	Sample preparation	19
6.2.1	Aqueous suspensions and paste	20
6.2.2	Non-aqueous suspensions and creams	20
6.2.3	Powders	21
6.2.4	Larger pieces of solids	21
6.3	Selection of reference materials, quality control materials and representative test materials	21
6.4	Optimization of ICP-MS operating conditions	22
7	Qualification, performance criteria and measurement uncertainty	23
7.1	Applicability of spICP-MS	23
7.2	System qualification and quality control	23
7.3	Method performance criteria	24
7.3.1	Particle number concentration	24
7.3.2	Particle mass and equivalent spherical diameter	24
7.4	Method precision and measurement uncertainty	25
8	General measurement procedure	25
9	Test report	26
9.1	Apparatus and measurement parameters	26
9.2	Reporting test results	26
