Nanotechnologies - Characterization of nano-objects using single particle inductively coupled plasma mass spectrometry

| Contents | | Page |
|--------------------|---|-------------|
| Foreword | | iv |
| Introduction | | v |
| 1 | Scope | 1 |
| 2 | Normative references | 1 |
| 3 | Terms and definitions | 1 |
| 4 | Abbreviated terms | 3 |
| 5 | Principles of operation | 4 |
| 5.1 | Introduction to spICP-MS | 4 |
| 5.2 | Reference material dependent calibration methods | 6 |
| 5.2.1 | Particle frequency method | 6 |
| 5.2.2 | Particle size method | 8 |
| 5.3 | Reference material free calibration methods | 9 |
| 5.3.1 | Dynamic mass flow method | 9 |
| 5.3.2 | Microdroplet calibration method | 11 |
| 5.4 | Particle number concentration determination | 13 |
| 5.5 | Particle mass and corresponding spherical equivalent diameter determination | 14 |
| 5.6 | Dissolved element fraction | 17 |
| 5.7 | Multi-isotope and multi-elemental analysis | 17 |
| 5.8 | Data treatment | 18 |
| 6 | Method development | 19 |
| 6.1 | Sample specification | 19 |
| 6.2 | Sample preparation | 19 |
| 6.2.1 | Aqueous suspensions and paste | 20 |
| 6.2.2 | Non-aqueous suspensions and creams | 20 |
| 6.2.3 | Powders | 21 |
| 6.2.4 | Larger pieces of solids | 21 |
| 6.3 | Selection of reference materials, quality control materials and representative test materials | 21 |
| 6.4 | Optimization of ICP-MS operating conditions | 22 |
| 7 | Qualification, performance criteria and measurement uncertainty | 23 |
| 7.1 | Applicability of spICP-MS | 23 |
| 7.2 | System qualification and quality control | 23 |
| 7.3 | Method performance criteria | 24 |
| 7.3.1 | Particle number concentration | 24 |
| 7.3.2 | Particle mass and equivalent spherical diameter | 24 |
| 7.4 | Method precision and measurement uncertainty | 25 |
| 8 | General measurement procedure | 25 |
| 9 | Test report | 26 |
| 9.1 | Apparatus and measurement parameters | 26 |
| 9.2 | Reporting test results | 26 |
| Bibliography | | 27 |
