ISO 24251-1:2025-08 (E)

Prevention of hydrogen assisted brittle fracture of high-strength steel components - Part 1: Fundamentals and measures

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Abbreviated terms 4

5 Fundamentals 5
5.1 General description of hydrogen embrittlement 5
5.2 Conditions for hydrogen embrittlement failure 5
5.2.1 General 5
5.2.2 Material susceptibility 6
5.2.3 Tensile stress 7
5.2.4 Sources of atomic hydrogen 7
5.3 Mechanism of hydrogen embrittlement of high strength steel 8
5.4 Fundamentals of metallic coatings regarding hydrogen uptake and diffusion 9
5.4.1 General aspects of metallic electroplated protection layers 9
5.4.2 Hydrogen generation during coating process 9
5.4.3 Corrosion protection mechanisms by metallic layers 9

6 Preventive measures with regard to hydrogen embrittlement 12
6.1 General 12
6.2 Part design and manufacturing 13
6.3 Material related measures and heat treatment 13
6.4 Reduction of residual tensile stress (stress relief) 14
6.5 Measures related to coating processes 14
6.5.1 General 14
6.5.2 Pre-treatment -- Cleaning processes 15
6.5.3 Electroplating coating processes 15
6.5.4 Stripping of coatings 15
6.5.5 Corrective actions - Baking 16
6.6 Prevention of environmental hydrogen uptake 17
6.6.1 General 17
6.6.2 Environmentally appropriate design 17

Annex A (informative) Electroplating processes 18

Annex B (informative) Principles of electrochemical corrosion 20
