ISO/TS 23359:2025-08 (E)

Nanotechnologies - Chemical characterization of graphene-related two-dimensional materials from powders and liquid dispersions

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 2

4 Abbreviated terms 4

5 Approaches to chemical characterization 5

6 X-ray photoelectron spectroscopy (XPS) 8
6.1 Introduction 8
6.2 Instrument preparation 8
6.3 Sample preparation 8
6.4 Method 9
6.5 Quantitative analysis 12

7 Thermogravimetric analysis (TGA) 13
7.1 Introduction 13
7.2 Sample preparation 15
7.2.1 General 15
7.2.2 Instrument conditions and preparation 15
7.2.3 Preparation of crucible 15
7.2.4 Measurement procedure 15
7.3 Data processing and quantitative analysis 16
7.3.1 Data plotting 16
7.3.2 Determination of the number of mass change steps 16
7.3.3 Determination of the temperature of maximum mass change rate (Tmax) 17
7.3.4 Identification of the GR2M present 17
7.3.5 Determine mass percentage 17

8 Inductively coupled plasma mass spectrometry (ICP-MS) 19

9 Fourier-transform infrared spectroscopy (FTIR) 19

10 Reporting 19
10.1 Introduction 19
10.2 X-ray photoelectron spectroscopy (XPS) 20
10.3 Thermogravimetric analysis (TGA) 20
10.4 Inductively coupled plasma mass spectrometry (ICP-MS) 20
10.5 Fourier-transform infrared spectroscopy (FTIR) 20

Annex A (informative) Inductively coupled plasma mass spectrometry (ICP-MS) 21

Annex B (informative) Fourier-transform infrared spectroscopy (FTIR) 26

Annex C (informative) Summary of X-ray photoelectron spectroscopy (XPS) interlaboratory studies 29

Annex D (informative) Summary of thermogravimetric analysis (TGA) interlaboratory study 34

Annex E (informative) Summary of inductively coupled plasma mass spectrometry (ICP-MS) interlaboratory study 41

Annex F (informative) Summary of Fourier-transform infrared spectroscopy (FTIR) mini-interlaboratory study 44

Bibliography 47
