Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1
3.1 Terms 2
3.2 Abbreviations and chemical formulas 2

4 Principle 3

5 Apparatus and materials 3
5.1 Gas chromatography with electron capture detector 3
5.1.1 Headspace vial and clamping machine 3
5.1.2 Carrier gases and column 3
5.1.3 Gas chromatograph 3
5.2 High-performance liquid chromatography-mass spectrometry 3
5.2.1 Vial 3
5.2.2 Carrier gases and column 3
5.2.3 Liquid chromatograph 4
5.3 Reagents 4
5.3.1 Probes 4
5.3.2 Other chemicals 4

6 Requirements 4
6.1 Sample 4
6.2 Evaluation system 4
6.3 Environment 5

7 Procedure 5
7.1 General 5
7.2 Introduce probe into the FB system and sample over time 5
7.3 Measurement of the probe compound concentration 6
7.4 Calculation of the probe kinetics model 6

8 Results and calculation 6
8.1 Commonly used probe for selection 6
8.2 Calibration curve for the probe-concentration measurement 6
8.2.1 High-performance liquid chromatography-mass spectrometry 6
8.2.2 Gas chromatography with ECD 9
8.3 Analysis of the probe with reaction time 10
8.4 Model development 11
8.5 Model verification 12

9 Report 13
9.1 Report of the testing results 13
9.2 Report of the testing conditions 13

Annex A (Informative) Commonly used probes for selection 14

Annex B (Informative) R code used for solving systems of Formulae 18

Annex C (Informative) Example of test results obtained with ozone FB treatment 20

Annex D (Informative) Example of test results obtained with FB combined plasma treatment 26

Annex E (Informative) Example of test results for detecting ROS in quiescent ozone MB water after H_2O_2 addition over storage time 31
