ISO 7383-3:2026-07 (E)

Fine bubble technology - Evaluation method for determining gas content in fine bubble dispersions in water - Part 3: Ozone content

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Principle and application 2
4.1 General 2
4.2 Iodometric titration 2
4.3 Ultraviolet photometry 3
4.3.1 Principle of measuring ozone in water by ultraviolet photometry 3
4.3.2 Principle of correcting the results using iodometric titration 3

5 Apparatus and materials 3
5.1 Iodometric titration 3
5.1.1 Reagents 3
5.1.2 Apparatus 4
5.2 Ultraviolet photometry 4
5.2.1 Apparatus 4
5.2.2 Device for measuring UFB size and concentration 5

6 Procedure 6
6.1 Iodometric titration 6
6.1.1 General 6
6.1.2 pH adjustment 6
6.1.3 Titration detection 6
6.1.4 Data calculation 7
6.1.5 Precautions 8
6.2 Ultraviolet photometry 8
6.2.1 General 8
6.2.2 Device calibration 8
6.2.3 Online testing 8
6.2.4 Accurate calculation of the real ozone content 8

7 Results and calculation 9
7.1 Iodometric titration 9
7.1.1 Use of water containing oxygen UFBs as the blank control 9
7.1.2 Determination of ozone content in ozone UFB dispersions 9
7.2 Ultraviolet photometry 9
7.2.1 Determination of ozone content in solutions with UFBs 9
7.2.2 Online measurement and data verification 9

8 Measurement errors 9
8.1 Iodometric titration 9
8.2 Ultraviolet photometry 10
8.3 Standard deviation of the measurement 10

9 Test report 10

Annex A (informative) Influence of high DO levels on iodometric titration 12

Annex B (informative) Example of a test result using iodometric titration in a testing laboratory 14

Annex C (informative) Comparison of iodometric titration and UV photometry test results of water samples with different UFB concentrations 16

Annex D (informative) Example of continuous ozone-content measurements using UV photometry 18
