ISO 4527:2003-05 (E)

Metallic coatings - Autocatalytic (electroless) nickel-phosphorus alloy coatings - Specification and test methods

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 2

4 Information to be supplied to the producer of the coating 3
4.1 Essential information 3
4.2 Additional information 3

5 Designation of basis metal, metal layers and heat treatment requirements 4
5.1 General 4
5.2 Designating the basis metal 4
5.3 Designation of heat treatment requirements 4
5.4 Designating the type and thickness of metal layers 5
5.5 Examples of designations 5

6 Requirements 5
6.1 Special test specimens 5
6.2 Appearance 5
6.3 Surface finish 6
6.4 Thickness 6
6.5 Hardness 6
6.6 Adhesion 6
6.7 Porosity 6
6.8 Corrosion resistance 6
6.9 Stress relief heat treatment prior to coating 7
6.10 Hydrogen embrittlement relief heat treatment after coating 7
6.11 Heat treatment to harden the coating 7
6.12 Heat treatment to improve adhesion 7
6.13 Wear resistance 7
6.14 Solderability 8
6.15 Chemical composition 8
6.16 Peening of metal parts 8
6.17 Undercoats and overcoats 8

7 Sampling 8

Annex A (normative) Heat treatment to improve adhesion and increase hardness 9

Annex B (informative) Thickness test methods 12

Annex C (informative) Guidance on thickness, composition and use of autocatalytic nickel-phosphorus coatings 15

Annex D (normative) Methods for chemical analysis of autocatalytic nickel coatings for phosphorus content 18

Bibliography 22
