

ISO 4527:2003-05 (E)

Metallic coatings - Autocatalytic (electroless) nickel-phosphorus alloy coatings - Specification and test methods

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	2
4	Information to be supplied to the producer of the coating	3
4.1	Essential information	3
4.2	Additional information	3
5	Designation of basis metal, metal layers and heat treatment requirements	4
5.1	General	4
5.2	Designating the basis metal	4
5.3	Designation of heat treatment requirements	4
5.4	Designating the type and thickness of metal layers	5
5.5	Examples of designations	5
6	Requirements	5
6.1	Special test specimens	5
6.2	Appearance	5
6.3	Surface finish	6
6.4	Thickness	6
6.5	Hardness	6
6.6	Adhesion	6
6.7	Porosity	6
6.8	Corrosion resistance	6
6.9	Stress relief heat treatment prior to coating	7
6.10	Hydrogen embrittlement relief heat treatment after coating	7
6.11	Heat treatment to harden the coating	7
6.12	Heat treatment to improve adhesion	7
6.13	Wear resistance	7
6.14	Solderability	8
6.15	Chemical composition	8
6.16	Peening of metal parts	8
6.17	Undercoats and overcoats	8
7	Sampling	8
Annex A (normative) Heat treatment to improve adhesion and increase hardness		9
Annex B (informative) Thickness test methods		12
Annex C (informative) Guidance on thickness, composition and use of autocatalytic nickel-phosphorus coatings		15
Annex D (normative) Methods for chemical analysis of autocatalytic nickel coatings for phosphorus content		18
Bibliography		22
