## Metallic coatings - Autocatalytic (electroless) nickel-phosphorus alloy coatings - Specification and test methods

---

| <b>Contents</b>       |  | <b>Page</b> |
|-----------------------|--|-------------|
| Foreword .....        |  | iv          |
| Introduction .....    |  | v           |
| 1                     | Scope .....  | 1           |
| 2                     | Normative references .....   | 1           |
| 3                     | Terms and definitions .....  | 2           |
| 4                     | Information to be supplied to the producer of the coating .....                              | 3           |
| 4.1                   | Essential information .....  | 3           |
| 4.2                   | Additional information .....   | 3           |
| 5                     | Designation of basis metal, metal layers and heat treatment requirements .....               | 4           |
| 5.1                   | General .....  | 4           |
| 5.2                   | Designating the basis metal .....  | 4           |
| 5.3                   | Designation of heat treatment requirements .....   | 4           |
| 5.4                   | Designating the type and thickness of metal layers .....                                     | 5           |
| 5.5                   | Examples of designations .....   | 5           |
| 6                     | Requirements .....   | 5           |
| 6.1                   | Special test specimens .....   | 5           |
| 6.2                   | Appearance .....   | 5           |
| 6.3                   | Surface finish .....   | 6           |
| 6.4                   | Thickness .....  | 6           |
| 6.5                   | Hardness .....   | 6           |
| 6.6                   | Adhesion .....   | 6           |
| 6.7                   | Porosity .....   | 6           |
| 6.8                   | Corrosion resistance .....   | 6           |
| 6.9                   | Stress relief heat treatment prior to coating .....  | 7           |
| 6.10                  | Hydrogen embrittlement relief heat treatment after coating .....                             | 7           |
| 6.11                  | Heat treatment to harden the coating .....   | 7           |
| 6.12                  | Heat treatment to improve adhesion .....   | 7           |
| 6.13                  | Wear resistance .....  | 7           |
| 6.14                  | Solderability .....  | 8           |
| 6.15                  | Chemical composition .....   | 8           |
| 6.16                  | Peening of metal parts .....   | 8           |
| 6.17                  | Undercoats and overcoats .....   | 8           |
| 7                     | Sampling .....   | 8           |
| Annex A (normative)   | Heat treatment to improve adhesion and increase hardness .....                               | 9           |
| Annex B (informative) | Thickness test methods .....   | 12          |
| Annex C (informative) | Guidance on thickness, composition and use of autocatalytic nickel-phosphorus coatings ..... | 15          |
| Annex D (normative)   | Methods for chemical analysis of autocatalytic nickel coatings for phosphorus content .....  | 18          |
| Bibliography .....    |  | 22          |
