Rubber - Guide to the calibration of test equipment

Contents		Page
Foreword		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Principles of calibration	2
5	Calibration systems	2
6	Traceability	2
7	Calibration intervals	2
8	Records	3
9	Estimate of uncertainty	3
10	Conditioning	3
11	Procedures	4
12	Expression of results	4
13	Calibration records	4
14	Electrical measurements	5
14.1	Current	5
14.2	Voltage	5
14.3	Frequency and bandwidth	5
14.4	Resistance	5
14.5	Wattage	6
14.6	Chart recorders	6
15	Dimensional measurements	6
15.1	Length-measuring instruments	6
15.2	Linear dimensions	6
15.3	Profiles	6
15.4	Extension, compression and deflection	7
15.5	Finish, roughness and flatness	7
15.6	Sieves, mesh and pore size	7
15.7	Area	7
15.8	Volume	7
15.9	Angle	7
15.10	Levelling	7
15.11	Centre of percussion	7
16	Fluids: flow, pressure, viscosity and density measurements	8
16.1	Flow meters	8
16.2	Devices producing a specified flow rate	8

16.3	Air exchange rate	8
16.4	Pressure transducers	8
16.5	Manometers	8
16.6	Devices producing a specified pressure	8
16.7	Density	8
17	Optical measurements	9
17.1	Irradiance	9
17.2	Refractometers	9
17.3	Colour-measuring instruments	9
18	Temperature measurements	9
19	Chemical analysis and reference materials	9
19.1	Glassware	9
19.2	pH-meters	9
19.3	Reference materials	10
20	Relative-humidity measurements	10
21	Force measurements	10
21.1	Tensile-, flexural- and compression-testing machines	10
21.2	Force transducers	10
21.3	Devices producing a specified force	10
21.4	Torque	10
21.5	Energy	11
21.6	Inertia	11
22	Mass measurements	11
22.1	Balances	11
22.2	Weights	11
23	Miscellaneous measurements	11
23.1	Timers, clocks, etc	11
23.2	Time intervals	11
23.3	Frequency and counters	12
23.4	Velocity	12
23.5	Tachometers	12
23.6	Rate of heating or cooling	12
24	Calibration schedules	12
	Annex A (informative) Calibration intervals	13
	Bibliography	15
