## Metallic materials - Calibration of force-proving instruments used for the verification of uniaxial testing machines

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1	Scope .....	1
2	Normative references .....	1
3	Terms and definitions .....	1
4	Symbols and their designations .....	1
5	Principle .....	2
6	Characteristics of force-proving instruments .....	3
6.1	Identification of the force-proving instrument .....	3
6.2	Application of force .....	3
6.3	Measurement of deflection .....	3
7	Calibration of the force-proving instrument .....	3
7.1	General .....	3
7.2	Resolution of the indicator .....	4
7.3	Minimum force .....	4
7.4	Calibration procedure .....	5
7.5	Assessment of the force-proving instrument .....	6
8	Classification of the force-proving instrument .....	7
8.1	Principle of classification .....	7
8.2	Classification criteria .....	8
8.3	Calibration certificate and duration of validity .....	8
9	Use of calibrated force-proving instruments .....	9
Annex A (informative)	Example of dimensions of force transducers and corresponding loading fittings .....	10
Annex B (informative)	Additional information .....	17
Bibliography .....		20
