## Rubber - Analysis by pyrolytic gas-chromatographic methods - Part 2: Determination of styrene/butadiene/isoprene ratio

---

| <b>Contents</b> |   | <b>Page</b> |
|-----------------|---|-------------|
| Foreword .....  |   | iv          |
| 1               | Scope .....   | 1           |
| 2               | Normative references .....                            | 1           |
| 3               | Principle .....                                       | 1           |
| 4               | Reagents .....  | 2           |
| 5               | Apparatus .....                                       | 2           |
| 5.1             | Extraction apparatus .....                            | 2           |
| 5.2             | Pyrolysis/chromatography system .....                 | 2           |
| 6               | Procedure .....                                       | 3           |
| 6.1             | Preparation of calibration curves .....               | 3           |
| 6.2             | Analysis of test samples of unknown composition ..... | 7           |
| 7               | Interpretation of results .....                       | 7           |
| 8               | Precision .....                                       | 7           |
| 9               | Test report .....                                     | 9           |
