

DIN EN 843-5:2007-03 (E)

Advanced technical ceramics - Mechanical properties of monolithic ceramics at room temperature - Part 5: Statistical analysis

Contents		Page
Foreword		3
1	Scope	4
2	Normative references	4
3	Terms and definitions	4
3.1	Flaws	4
3.2	Flaw distributions	5
3.3	Mechanical evaluation	5
3.4	Statistical terms	6
3.5	The Weibull distribution	7
4	Symbols	8
5	Significance and use	10
6	Principle of calculation	11
6.1	Maximum likelihood method	11
6.2	Bias correction	12
6.3	Confidence interval	12
7	Procedure	13
7.1	Graphical representation of data	13
7.2	Determination of Weibull parameters by maximum likelihood method	13
7.3	Determination of limits of the confidence interval	14
8	Test report	14
Annex A (informative) Relationship between characteristic strengths of test pieces or components of different size or shape, or with different stress fields applied		15
Annex B (informative) FORTRAN program for calculating Weibull parameters		17
Annex C (informative) PASCAL program for calculating Weibull parameters		23
Annex D (informative) BASIC program for calculating Weibull parameters		28
Annex E (normative) Unbiasing factors for estimation of Weibull modulus, m^{\wedge}		33
Annex F (normative) Confidence factors for characteristic strength, $^{\wedge} 0$		34
Annex G (normative) Confidence factors for Weibull modulus, m^{\wedge}		36
Annex H (informative) Worked examples		38
Annex I (informative) Example test report		43
Bibliography		45
