Rubber and rubber products_ - Guidance on the application of statistics to physical testing

Contents

Page

Foreword.....	vi
Introduction	vii
1 Scope	1
2 References.....	1
3 Terms and definitions.....	1
4 Symbols	4
5 Limitations of test results	5
5.1 Variability.....	5
5.2 Accuracy, trueness and precision	6
5.3 Relevance and significance.....	7
6 Distribution of results and measures of central tendency	7
6.1 Principles.....	7
6.2 Methodology.....	8
6.2.1 Types of distribution	8
6.2.2 Measures of central tendency	12
6.2.3 Measures of dispersion.....	15
6.2.4 Transformation to normal distribution	16
6.2.5 Test of departure from normality	17
6.3 Applications to rubber testing.....	20
6.3.1 General.....	20
6.3.2 Tensile testing.....	20
6.3.3 Fatigue	21
6.3.4 Conversion to normal distribution.....	24
6.3.5 Other uses of the median.....	25
7 Confidence limits and significant difference	26
7.1 Principles.....	26
7.2 Methodology.....	26
7.2.1 Confidence limits and confidence intervals	26
7.2.2 Significant difference	31
7.3 Applications to rubber testing.....	35
7.3.1 General.....	35
7.3.2 Confidence limits and specification limits.....	35
7.3.3 Comparison of results.....	36
8 Ranking methods.....	37
8.1 Principles.....	37
8.2 Methodology.....	37
8.2.1 Friedman's test	37
8.2.2 The outside count test.....	39
8.3 Applications to rubber testing.....	39
9 Criteria for rejecting outliers	40
9.1 Principles.....	40
9.2 Methodology.....	41
9.2.1 General.....	41
9.2.2 Dixon's test.....	41
9.2.3 Cochran's test for variance	43
9.3 Applications to rubber testing.....	45
9.3.1 General.....	45

9.3.2	Dixon's test applied to individual results	45
9.3.3	Cochran's variance test.....	46
9.3.4	Dixon's test applied to a group of mean values	47
10	Analysis of variance (ANOVA)	47
10.1	Principles	47
10.2	Methodology.....	48
10.2.1	General	48
10.2.2	One factor with an equal number of replicates.....	48
10.2.3	One factor with a variable number of replicates.....	49
10.2.4	Two (and over) factor analysis of variance	50
10.3	Applications to rubber testing	50
11	Regression analysis	54
11.1	Principles	54
11.2	Methodology.....	55
11.2.1	General	55
11.2.2	Linear least squares	55
11.2.3	Quadratic least squares	56
11.2.4	Cubic least squares	56
11.3	Applications to rubber testing	56
11.3.1	General	56
11.3.2	The effect of temperature on compression set.....	56
11.3.3	Effect of ageing on tensile strength	58
11.3.4	Temperature of retraction test.....	59
12	Uncertainty of measurement.....	60
12.1	Principles	60
12.2	Methodology.....	61
12.2.1	Compilation of a single value for uncertainty	61
12.2.2	Random uncertainty (U_r)	61
12.2.3	Systematic uncertainty (U_s)	62
12.2.4	Deviation of a single value of total uncertainty	63
12.2.5	Reporting of results	63
12.3	Applications to rubber testing	63
13	Sampling	64
13.1	Principles	64
13.2	Methodology.....	65
13.2.1	General	65
13.2.2	Acceptable quality level and limiting quality	65
13.2.3	Assessment of nonconformity	65
13.2.4	Inspection levels	66
13.2.5	Plans for sampling by attributes	66
13.2.6	Random sampling	67
13.3	Applications to rubber testing	68
14	Number of test pieces.....	68
14.1	Principles	68
14.2	Methodology.....	69
14.3	Applications to rubber testing	69
14.3.1	General	69
14.3.2	Refinement of confidence limits.....	69
14.3.3	Refinement of a pass/fail status	70
15	Expression of results.....	70
15.1	Principles	70
15.2	Methodology.....	70
15.2.1	The test report	70
15.2.2	Rounding.....	72
15.3	Applications to rubber testing	73
15.3.1	General	73
15.3.2	Construction of a histogram	73

15.3.3	Examples of rounding	74
16	Precision statements	74
16.1	General	74
16.2	Principles	74
16.3	Methodology	75
16.4	Applications to rubber testing	77
17	Design of experiments	78
17.1	General information and principles	78
17.1.1	General information	78
17.1.2	Principles	79
17.2	Methodology	92
17.2.1	General	92
17.2.2	Descriptive experiments	92
17.2.3	Comparative experiments	93
17.2.4	Response experiments	95
17.3	Applications to rubber testing	95
17.3.1	Descriptive experiments	95
17.3.2	Comparative experiments	97
17.3.3	Response experiments	101
18	Statistical quality control	105
18.1	Principles	105
18.2	Methodology	106
18.2.1	General	106
18.2.2	Control charts by attributes	106
18.2.3	Control charts by variables	106
18.3	Applications to rubber testing	108
18.3.1	General	108
18.3.2	Control charts	108
18.3.3	Cusum chart	111
Annex A	(informative) Mathematical form of the distribution functions referenced in this International Standard	115
Annex B	(informative) Additional forms of mean value	117
Annex C	(informative) Inter-relationships for measures of central tendency in the double exponential and Weibull distributions	118
Annex D	(informative) Equation for the calculation of standard deviation	119
Annex E	(informative) Construction of Weibull probability paper	121
Annex F	(informative) Equations for the calculation of Student's <i>t</i> -values	122
Annex G	(informative) Analysis of variance	123
Annex H	(informative) Equations for the calculation of regression coefficients	127
Annex I	(informative) The intercal method	129
Bibliography	130
