

ISO 19906:2010-12 (E)

Petroleum and natural gas industries - Arctic offshore structures

Contents		Page
Foreword		vi
Introduction		vii
1	Scope	1
2	Normative references	1
3	Terms and definitions	2
4	Symbols and abbreviated terms	10
4.1	Symbols	10
4.2	Abbreviated terms	10
5	General requirements and conditions	11
5.1	Fundamental requirements	11
5.2	Design methods	12
5.3	Site-specific considerations	12
5.4	Construction, transportation and installation	13
5.5	Design considerations	13
5.6	Environmental protection	14
5.7	Vibrations and crew comfort	14
6	Physical environmental conditions	14
6.1	General	14
6.2	Daylight hours	15
6.3	Meteorology	15
6.4	Oceanography	16
6.5	Sea ice and icebergs	17
6.6	Seabed considerations	18
7	Reliability and limit states design	19
7.1	Design philosophy	19
7.2	Limit states design method	21
8	Actions and action effects	26
8.1	General	26
8.2	Ice actions	26
8.3	Metocean related actions	31
8.4	Seismic actions	32
9	Foundation design	33
9.1	General	33
9.2	Site investigation	34
9.3	Characteristic material properties	36
9.4	Design considerations	37
9.5	Gravity base structures	40
9.6	Piled structures	42
9.7	Floating structures	43
9.8	Scour	44
9.9	Inspection and performance monitoring	45
9.10	Seismic analysis	45

10	Man-made islands	45
10.1	General	45
10.2	Island types	45
10.3	Design considerations	47
10.4	Seismic design	52
10.5	Construction	53
10.6	Monitoring and maintenance	53
10.7	Decommissioning and reclamation	54
11	Fixed steel structures	54
11.1	General	54
11.2	General design requirements	55
11.3	Structural modelling and analysis	55
11.4	Strength of tubular members and joints	56
11.5	Strength of stiffened-plate panels	56
11.6	Strength of steel-concrete composite walls	56
11.7	Seismic design	58
11.8	Fatigue	59
11.9	Materials, testing and NDT	59
11.10	Corrosion and abrasion protection	60
11.11	Welding	60
12	Fixed concrete structures	60
12.1	General requirements	60
12.2	Actions and action effects	61
12.3	Structural analysis	61
12.4	Concrete works	63
12.5	Mechanical systems	69
12.6	Marine operations and construction afloat	70
12.7	Corrosion control	70
12.8	Inspection and condition monitoring	70
13	Floating structures	71
13.1	General	71
13.2	General design methodology	71
13.3	Environment	73
13.4	Actions	73
13.5	Hull integrity	75
13.6	Hull stability	76
13.7	Stationkeeping	77
13.8	Mechanical systems	79
13.9	Operations	82
14	Subsea production systems	84
14.1	General	84
14.2	Ice and seabed considerations	85
14.3	Actions on subsea production systems	87
14.4	Seismic design	89
14.5	Risk reduction	89
15	Topsides	90
15.1	Overall considerations	90
15.2	Design and operational requirements	93
15.3	Seismic design	101
16	Other ice engineering topics	102
16.1	Ice roads and supplies over ice	102
16.2	Artificial ice islands	104
16.3	Protection barriers	105
16.4	Measurements of ice pressure and actions	107
16.5	Ice tank modelling	108

16.6	Offloading in ice	109
17	Ice management	110
17.1	General	110
17.2	Ice management system	111
17.3	Ice management system capabilities	112
17.4	Ice management planning and operations	113
18	Escape, evacuation and rescue	114
18.1	General	114
18.2	EER philosophy	115
18.3	EER strategy	115
18.4	Environment	115
18.5	Hazard and risk analysis	116
18.6	Continuous assessment	117
18.7	EER system design	117
18.8	Emergency response organization	117
18.9	Competency assurance	118
18.10	Communications and alarms	118
18.11	Personal protective equipment	118
18.12	Man overboard recovery	118
18.13	Escape design	119
18.14	Evacuation design	119
18.15	Rescue design	120
	Annex A (informative) Additional information and guidance	121
	Annex B (informative) Regional information	331
	Bibliography	444
