ISO 19900:2013-12 (E)

Petroleum and natural gas industries - General requirements for offshore structures

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Symbols and abbreviated terms 6
4.1 Symbols 6
4.2 Abbreviated terms 7

5 General requirements and conditions 8
5.1 General 8
5.2 Fundamental requirements 8
5.3 Robustness 8
5.4 Planning 9
5.5 Durability, maintenance and inspection 9
5.6 Hazards 10
5.7 Design basis 10
5.8 Service requirements 10
5.9 Operating requirements 11
5.10 Special requirements 11
5.11 Location and orientation 11
5.12 Structural configuration 12
5.13 Environmental conditions 14
5.14 Construction and deployment 18
5.15 Decommissioning and removal 18

6 Exposure levels 18
6.1 General 18
6.2 Life-safety categories 19
6.3 Consequence categories 20
6.4 Determination of exposure level 21

7 Limit states design 22
7.1 Limit states 22
7.2 Design 23

8 Basic variables 24
8.1 General 24
8.2 Actions 24
8.3 Resistances 26

9 Partial factor design approach 27
9.1 Principles 27
9.2 Actions and their combinations 28
9.3 Properties of materials and soils 30
9.4 Geometric parameters 31
9.5 Uncertainties of calculation models 31

9.6 Values for partial factors 31
9.7 Structural reliability analysis 32

10 Models and analysis 32

11 Quality management 33
11.1 General 33
11.2 Responsibilities 34
11.3 Quality management system 34
11.4 Quality control plan 34
11.5 Installation inspection 35
11.6 In-service inspection, maintenance and repair 35
11.7 Records and documentation 36

12 Assessment of existing structures 37
12.1 General 37
12.2 Condition assessment 38
12.3 Action assessment 39
12.4 Resistance assessment 39
12.5 Component and system failure consequences and mitigation 39
12.6 Fatigue 39
12.7 Mitigation 39

Annex A (informative) Additional information and guidance 40

Bibliography 47
