ISO 23978:2020 (E)

Natural gas — Upstream area — Determination of composition by Laser Raman spectroscopy

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

4.1 Working principle of the laser Raman analyser
4.2 Calculation

5 Instruments

5.1 Laser Raman gas analyser
5.2 Laser specifications
5.3 Detection module
5.4 Signal processing and user interface
5.5 Sample filtration and probe
5.6 Gas pressure regulator
5.7 Sulfur compound absorber

6 Reagents and materials

6.1 Zero gas
6.2 Base span calibration gases
6.3 Working span calibration gases

7 Measurement procedures

7.1 preparation
7.2 Calibration
7.2.1 Calibration frequency
7.2.2 Calibration procedure
7.2.3 Zero calibration
7.2.4 Base span calibration
7.2.5 Working span calibration
7.3 Sampling and sample analysis
7.4 Data record

8 Repeatability

9 Uncertainty evaluation

9.1 General
9.2 Uncertainty of li and IRi
9.3 Uncertainty of CRi
9.4 Uncertainty of result

10 Test report

Annex A (informative) Statistical procedure for estimation of the repeatability

A.1 Background
A.2 Calibration gas and test sample
A.3 Experiments

A.4 Raw data of the test
A.5 Data processing
A.6 Repeatability results
