ISO 16708:2006-04 (E)

Petroleum and natural gas industries - Pipeline transportation systems - Reliability-based limit state methods

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Symbols and abbreviated terms 5
4.1 Symbols 5
4.2 Abbreviated terms 6

5 Principles for design and operation 7

6 Reliability based limit state methods 9
6.1 General 9
6.2 Design and operational data basis -- Data gathering 9
6.3 Safety requirements -- target 9
6.4 Failure mode analysis 10
6.5 Uncertainty analysis 10
6.6 Reliability analysis 11
6.7 Safety and risk assessment 11

7 Design and operational requirements 12
7.1 General 12
7.2 Design and construction 12
7.3 Operation and maintenance 12
7.4 Re-qualification 13
7.5 Hazards 13

8 Acceptance criteria and safety classes 13
8.1 Safety requirements 13
8.2 Classification of limit states 14
8.3 Categorization of fluids 14
8.4 Pipeline location and consequence categorization 15
8.5 Safety classes 16

9 Target safety levels and risk levels 17

10 Failure modes 17
10.1 General 17
10.2 Internal pressure induced failure modes 17
10.3 External pressure induced failure modes 18
10.4 Failure due to external load effects 18
10.5 Failure due to third-party activity 19
10.6 Corrosive environment induced failure modes 19
10.7 Failure due to combined loads 19

11 Pipeline operational management 20

11.1 General 20
11.2 Operational management procedures 20

Annex A (informative) Uncertainty and reliability analysis -- Method description 23

Annex B (informative) Statistical database -- Uncertainty values 43

Annex C (informative) Target safety levels -- Recommendations 49

Bibliography 56
