## Paper and board - Testing of cores - Part 8: Determination of natural frequency and flexural modulus by experimental modal analysis

---

| <b>Contents</b>    |  | <b>Page</b> |
|--------------------|--|-------------|
| Foreword .....     |  | iv          |
| 1                  | Scope .....                                      | 1           |
| 2                  | Normative references .....                       | 1           |
| 3                  | Terms and definitions .....                      | 1           |
| 4                  | Principle .....                                  | 2           |
| 5                  | Apparatus .....                                  | 2           |
| 6                  | Test piece .....                                 | 2           |
| 6.1                | Sampling .....                                   | 2           |
| 6.2                | Test-piece size .....                            | 3           |
| 6.3                | Conditioning .....                               | 3           |
| 7                  | Procedure .....                                  | 5           |
| 8                  | Calculation .....                                | 5           |
| 8.1                | Calculation of the flexural modulus .....        | 5           |
| 8.2                | Calculation of the rotational speed factor ..... | 6           |
| 9                  | Test report .....                                | 6           |
| Bibliography ..... |  | 8           |
