# ISO/TS 21331:2020 (E)

## Graphic technology and deinked pulp — Guidance for assessing the deinking performance of printed paper products

# Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

3.1 Terms related to material
3.2 Terms relating to paper recycling and deinking
3.3 Terms relating to quality requirements

4 How deinkability contributes to recyclability in support of the circular economy

4.1 What is circular economy? The importance of recyclability
4.2 Specific recommendations for printing
4.3 Specifics recommendations for converting

5 Relevant deinking processes

5.1 General
5.2 Pulping
5.3 Flotation
5.4 Washing
5.5 Dispersing
5.6 Bleaching

6 Deinking performance

6.1 Principles for assessment of deinking performance of printed products
6.2 General experience

7 Quality characteristics of industrial deinked pulps

7.1 General
7.2 Pulp Brightness
7.3 Pulp Colour
7.4 Dirt Particles

8 Possible usages of industrial deinked pulps (based on Clause 7 characteristics)

9 Reporting

Annex A Deinking methods

A.1 Objectives for assessment of deinkability
A.2 Laboratory deinking methods
A.3 Examples of commonly used deinking tests
A.3.1 Tests operated in Pilot plants (usually testing blends of Paper for Recycling)
A.3.2 Tests operated in Laboratory (usually testing pure product)
