Statistical interpretation of data - Part 6: Determination of statistical tolerance intervals

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms,definitionsandsymbols 1
3.1 Terms and definitions 1
3.2 Symbols 2

4 Procedures 3
4.1 Normal population with known mean and known variance 3
4.2 Normal population with unknown mean and known variance 3
4.3 Normal population with unknown mean and unknown variance 4
4.4 Normal populations with unknown means and unknown common variance 4
4.5 Any continuous distribution of unknown type 4

5 Examples 4
5.1 Data for Examples 1 and 2 4
5.2 Example 1: One-sided statistical tolerance interval with unknown variance and unknown mean 5
5.3 Example 2: Two-sided statistical tolerance interval under unknown mean and unknown variance 6
5.4 Data for Examples 3 and 4 6
5.5 Example 3: One-sided statistical tolerance intervals for separate populations with unknown common variance 7
5.6 Example 4: Two-sided statistical tolerance intervals for separate populations with unknown common variance 8
5.7 Example 5: Any distribution of unknown type 10

Annex A (informative) Exact k-factors for statistical tolerance intervals for the normaldistribution ..12

Annex B (informative) Forms for statistical tolerance intervals 17

Annex C (normative) One-sided statistical tolerance limit factors, kC(n; p;1-), for unknown 21

Annex D (normative) Two-sided statistical tolerance limit factors, kD(n; m;p;1-), for unknown common (m samples) 26

Annex E (normative)Distributionfreestatisticaltoleranceintervals 40

Annex F (informative) Computation of factors for two-sided parametric statistical tolerance intervals 42

Annex G (informative)Constructionofadistributionfreestatisticaltoleranceintervalforany typeofdistribution 44
