Foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 6

4 Symbols 7

5 Design stresses 8

6 Structural components to be assessed 10

7 Load cases 10
7.1 General 10
7.2 Load case 1 -- Fixed keel at 90° knockdown 11
7.3 Load case 2 -- Canted keel steady load at 30° heel with dynamic overload factor 12
7.4 Load case 3 -- Keelboat vertical pounding 13
7.5 Load case 4 -- Keelboat longitudinal impact 14
7.6 Load case 5 -- Centreboard on capsize recoverable dinghies 15
7.7 Load case 6 -- Centreboard or dagger board upwind 15
7.8 Other load cases 16

8 Computational methods 19
8.1 General 19
8.2 General guidance for assessment by 3D numerical procedures 19
8.3 Assessment by strength of materials/non-computational-based methods 20

9 Compliance 20

Annex A (normative) Application declaration 22

Annex B (informative) Information on metal for appendages and fasteners and "established practice" for fastening and welding 23

Annex C (informative) "Established practice" structural arrangement for ballast keels 34

Annex D (informative) "Established practice" calculation of keel fin strength (fixed or canting) and fixed ballast keel connected by bolts 48

Annex E (informative) Geometrical properties of some typical appendage foil shapes 65

Annex F (informative) Simplified fatigue strength assessment 68
