ISO 17357-1:2014-01 (E)

Ships and marine technology - Floating pneumatic rubber fenders - Part 1: High pressure

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Classification 3
4.1 High-pressure fender types 3
4.2 Initial internal pressure 3

5 Ordering or inquiring information 3
5.1 Information to the manufacturer 3
5.2 Information from the manufacturer 3

6 Requirements 4
6.1 General high pressure fender requirements 4
6.2 Type requirements 4
6.3 Pressure requirements 4

7 Performance 5
7.1 Specification of performance 5
7.2 Performance curves 5
7.3 Fender performance 5

8 Performanceconfirmationofprototypefendertest 5
8.1 General 5
8.2 Performance test, parallel compression test 6
8.3 Angular compression test 8
8.4 Durability test 8
8.5 Compression-recovery test 8
8.6 Puncture-resistance test 8
8.7 Recording condition 9

9 Test and inspection for commercial fenders 9
9.1 General 9
9.2 Material test of rubber 9
9.3 Dimensional inspection 9
9.4 Air-leakage test 9
9.5 Hydrostatic-pressure test 9

10 Marking 10

11 Documentation 10

12 Inspectionandevaluationbyaqualifiedindependentinspectionservice 11

Annex A (informative) Synthetic-tyre-cord layer 15

Annex B (informative) Flange opening and bead ring, metal parts 17
