ISO 20313:2018-01 (E)

Ships and marine technology - Cathodic protection of ships

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 2

4 Competence of personnel 3

5 Design basis 3
5.1 General 3
5.2 Cathodic protection criteria 4
5.3 Design process 5
5.4 Design considerations 6
5.4.1 Cathodic protection zones of ship hull (external) 6
5.4.2 Internal cathodic protection zones 6
5.4.3 Component characteristics 7
5.4.4 Service conditions 7
5.5 Current demand 7
5.5.1 General 7
5.5.2 Design current density for bare steel 8
5.5.3 Design current density for coated steel 8
5.5.4 Current demand 9
5.6 Cathodic protection systems 11
5.7 Electrical continuity 12
5.8 Fitting out period 12

6 Impressed current system 12
6.1 Objectives 12
6.2 Design considerations 12
6.3 Equipment considerations 13
6.3.1 Power source, monitoring and control systems 13
6.3.2 Anodes 15
6.3.3 Dielectric shields 16
6.3.4 Permanent reference and measurement electrodes 16
6.3.5 Cables and terminations 16
6.3.6 Cofferdams 17

7 Galvanic anode systems 17
7.1 Objectives 17
7.2 Design considerations 18
7.3 Anode materials 18
7.4 Factors determining the anode current output and operating life 19
7.5 Location of anodes 19
7.5.1 External hull surfaces 19
7.5.2 Internal surfaces 20

8 Commissioning, operation and maintenance 23
8.1 Objectives 23

8.2 Measurement procedures ... 23
8.3 Commissioning: Galvanic systems ... 24
8.4 Commissioning: Impressed current systems ... 24
8.4.1 Visual inspection ... 24
8.4.2 Pre-energizing measurements ... 25
8.4.3 Initial energizing ... 25
8.4.4 Performance assessment ... 25
8.5 Operation and maintenance ... 26
8.5.1 General ... 26
8.5.2 Galvanic anode systems ... 26
8.5.3 Impressed current systems ... 26
8.5.4 Interaction with adjacent structures ... 27
8.6 Dry-docking period ... 27

9 Theprotectionofships'hullsduringfitting out and when laid up ... 28
9.1 Fitting out period ... 28
9.2 Lay-up period ... 28

10 Documentation ... 28
10.1 Objectives ... 28
10.2 Galvanic anode systems ... 29
10.3 Impressed current system ... 29

Annex A (informative) Impressed current system for external hulls of ships based on two cathodic protection zones ... 31

Annex B (informative) Guidance on design current density values for cathodic protection of ship's hulls and tanks ... 32

Annex C (informative) Anode resistance, current and life duration formulae ... 34

Annex D (informative) Electrical bonding systems ... 39

Annex E (informative) Monitoring of electrical bonding of a ship's propeller ... 41

Annex F (informative) Impressed current system for ships based on an aft (stern) system only ... 42

Annex G (informative) Location of galvanic anodes in the stern area ... 43

Annex H (informative) Electrochemical characteristics of impressed current anodes ... 44

Annex I (informative) Cofferdam arrangements ... 46

Annex J (informative) Cathodic protection of a moored ship using suspended galvanic anodes ... 49

Annex K (informative) Anode/cathode separation (dielectric shield) calculations ... 51

Annex L (Informative)Galvanicanodespecifications ... 52

Annex M (informative) Use of portable coupons ... 55

Bibliography ... 56
