ISO 15738:2019 (E)

Ships and marine technology — Maritime safety — Gas inflation systems for inflatable life-saving appliances

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Gas cylinder — Salt water exposure test

5 Inflation gas

5.1 Type and quantity
5.2 Dryness

6 Gas cylinder valve and operating head

6.1 General
6.2 Gas cylinder valve
6.2.1 General
6.2.2 Testing
6.2.2.1 Safety relief test
6.2.2.2 Proof-load test
6.2.2.3 Temperature cycling test
6.2.2.4 Cold inflation test
6.2.2.5 Fatigue test
6.2.2.6 Long-term leak test
6.2.2.7 Impact test
6.2.2.8 Torque test
6.2.2.9 Salt water exposure test
6.2.2.9.1 Application
6.2.2.9.2 Test procedure
6.3 Gas cylinder operating head
6.3.1 General
6.3.2 Testing
6.3.2.1 Hot actuation-force test
6.3.2.2 Cold actuation-force test
6.3.2.3 Ambient actuation-force test
6.3.2.4 Salt water exposure test
6.3.2.5 Impact test
6.3.2.6 Water ingress test

7 High-pressure hose assembly

7.1 General
7.2 Testing
7.2.1 Pressure test
7.2.2 Cold pressure test
7.2.3 Salt water exposure test
7.2.4 Hydraulic pressure test
7.2.5 Cold bend test
7.2.6 Joint-securing test
7.2.7 Flow test

8 Valves — Pressure-relief/transfer, inflate/deflate, non-return

8.1 Pressure-relief/transfer valve
8.1.1 Torque test
8.1.2 Valve thread strength test
8.1.3 Plug test
8.1.4 Salt water exposure test
8.1.5 Pressure test
8.1.6 Drop test
8.1.7 Valve securing test (where applicable)
8.1.8 Pulsating load test
8.1.9 Overpressure test
8.1.10 Flow test
8.2 Inflate/deflate valve
8.2.1 Torque test
8.2.2 Valve thread strength test
8.2.3 Plug test
8.2.4 Salt water exposure test
8.2.5 Leak test
8.2.6 Valve-securing test (Where applicable)
8.2.7 Drop test
8.2.8 Flow test
8.3 Non-return valve
8.3.1 Torque test
8.3.2 Valve thread strength test
8.3.3 Salt water exposure test
8.3.4 Valve pull test
8.3.5 Leak test
8.3.6 Valve-securing test (Where applicable)
8.3.7 Drop test

9 Final determination of suitability of a system

10 Installation
