ISO 21851:2020 (E)

Marine technology — Ocean observation systems — Design criteria of ocean hydro-meteorological observation systems reuse and interaction

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions, and abbreviated terms

3.1 Terms and definitions
3.2 Abbreviated terms

4 System architecture, workflow and types of interfaces

4.1 Architecture
4.1.1 General
4.1.2 Function module
4.1.3 Standardized interface
4.1.4 Registration centre
4.1.4.1 General
4.1.4.2 OHM-CVI registration interface
4.1.4.3 OHM-CVI query interface
4.2 Workflow
4.3 Type of interfaces — MQ and REST
4.3.1 MQ
4.3.2 REST

5 Attribute description and observation elements

5.1 Attribute description
5.1.1 General
5.1.2 OHM-CVI description
5.1.3 Instrument description
5.1.4 Parameter description
5.2 Observation elements
5.2.1 General
5.2.2 Hydrologic data
5.2.3 Meteorological data

6 Function module

6.1 Data storage
6.2 Platform navigation
6.3 Instrument status display
6.4 Data display
6.5 Graphic display
6.6 Comprehensive query
6.7 Statistic analysis
6.8 Data export
6.9 Print management
6.10 Console management
6.11 Error and logging

7 Data interfaces

7.1 Transmitted data format
7.2 Input interfaces

7.2.1 Data input interfaces
7.2.1.1 Source data input interface
7.2.1.2 Instrument status input interface
7.2.2 OHM-CVI interaction
7.3 Output interfaces
7.3.1 General
7.3.2 Observation data output interface
7.3.3 Instrument status output interface

8 Exception

8.1 General
8.2 Response for an exception

Annex A (informative) Example of OHM-CVI description file

A.1 Introduction
A.2 OHM-CVI attributes
A.3 Instrument attributes
A.4 OHM-CVI description file
