ISO/TR 9814:2025-06 (E)

Ships and marine technology - Good practices of preventing capsizing during turning of ships with large profile height

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Abbreviated terms 2

5 Analysis of capsize accidents of five ships 3
5.1 General 3
5.2 Ship categories based on cargo space requirements 4
5.2.1 Weight carrier 4
5.2.2 Volume carrier 4
5.2.3 Area carrier 4
5.3 Analysis of capsize accidents 4
5.3.1 General 4
5.3.2 Similarities 4
5.3.3 Differences 5

6 Effect of KG on the GZ curve 5
6.1 KG and its role in capsizing accidents 5
6.2 Characteristics of hull form and GZ curves 9
6.2.1 General 9
6.2.2 Hull forms with two inflection points along the GZ curve 9

7 Three good practices to prevent capsizing during turning of ships 10
7.1 General 10
7.2 Semi-automatic inclining tests before loaded departure 10
7.2.1 General 10
7.2.2 Features of inclining test before departure 11
7.2.3 Stability screening without inclining test 12
7.3 Maximum heeling angle while turning 14
7.3.1 General 14
7.3.2 Maritime autonomous surface ships 15
7.3.3 Considerations on cargo slippage 16
7.4 Precise calculation of free surface moment (FSM) 17
7.4.1 Slack limit of NAPA software 17
7.4.2 FSM at 98 % filling level 17
7.4.3 Improvement of stability calculation software 18

Annex A (informative) Cases of capsizing accidents 19

Annex B (informative) Additional information on ship features 28
